

## **HEALTH/ COVID SAFETY**

We are using the EvaClean Infection Prevention and Control Program. EvaClean program is a fully integrated, touch-less sanitizing and disinfection solution that combines the power and efficiency of the Electrostatic spraying technology (EPA registered) with TABS (EPA registered) disinfectants, sanitizers, and bleach alternatives that meet high standards for efficacy, safety, value, and sustainability. These revolutionary disinfecting tablets are 99.9% effective, dissolve in water, ultra-lightweight. TABS are effervescent disinfecting & sanitizing tablets that deliver high performance without harsh chemicals.

In addition to TABS, we use Prot Electrostatic Sprayers. These sprayers have demonstrated effectiveness against viruses similar to COVID-19 on hard, nonporous surfaces. PRS technology uses the electrostatic process to atomize the cleaning product with high pressurized air. The droplets pass an electrode inside the nozzle creating a magnetically charged spray that seeks out and wraps around all touchpoints and grounded room surfaces.
